

Tutorial to help with flexible ways of partitioning. https://youtu.be/_WVdg5aT0c8

Partition the numbers in a range of ways e.g. $234 = 200 + 30 + 4$ Or $200 + 34$ Or $230 + 4$ Or $134 + 100$

$$849 = \underline{\quad} + \underline{\quad} + \underline{\quad} \quad (1)$$

$$511 = \underline{\quad} + \underline{\quad} + \underline{\quad} \quad (2)$$

$$367 = \underline{\quad} + \underline{\quad} + \underline{\quad} \quad (3)$$

$$554 = \underline{\quad} + \underline{\quad} + \underline{\quad} \quad (4)$$

$$965 = \underline{\quad} + \underline{\quad} + \underline{\quad} \quad (5)$$

$$330 = \underline{\quad} + \underline{\quad} + \underline{\quad} \quad (6)$$

$$208 = \underline{\quad} + \underline{\quad} + \underline{\quad} \quad (7)$$

$$275 = \underline{\quad} + \underline{\quad} + \underline{\quad} \quad (8)$$

$$478 = \underline{\quad} + \underline{\quad} + \underline{\quad} \quad (9)$$

$$270 = \underline{\quad} + \underline{\quad} + \underline{\quad} \quad (10)$$
